CANDIDATE PERFORMANCE SUMMARY

DIMENSIONAL SCORING

PERSONALIZED SYLLABUS EVALUATION LOG

Python Language Proficiency & Best Practices

Score: 0/10

Modality: CODE

The candidate submitted the starter code without any modifications or implementation. The function, as submitted, does not perform any of the required processing steps (whitespace removal, title casing, stop word removal, keyword identification) and will always return an empty list, completely failing to address the prompt's requirements.

SQL & Relational Database Design

Score: 0/10

Modality: MCQ

The candidate's choice of `DISTKEY` on a randomly generated `transaction\_id` is incorrect. While it ensures even data distribution, it does not co-locate data for the frequently queried `customer\_id` or `transaction\_date`, leading to increased data movement across nodes for analytical reports. The optimal design for the given query patterns would be `DISTKEY` on `customer\_id` and `SORTKEY` on `transaction\_date`.

Data Pipeline Engineering

Score: 0/10

Modality: CODE

The candidate submitted the provided starter code without any modifications. The function body remains empty (`pass`), indicating no attempt was made to implement the required logic or solve the problem.

Machine Learning Model Productionization

Score: 0/10

Modality: None

No reasoning available.

Scalable Backend API Architecture with Python

Score: 0/10

Modality: None

No reasoning available.

Cloud-Native Infrastructure & DevOps for ML Systems

Score: 0/10

Modality: None
