AI Match Score: 92.0%

AI VERDICT

ACCEPT

Som Pande demonstrates exceptional technical proficiency in AI and backend engineering, with a proven track record of delivering scalable, high-performance solutions at KPMG. His ability to optimize API latency and migrate complex legacy workflows into efficient Python-based architectures aligns perfectly with high-availability service requirements. Despite being early in his career, his 'Senior-mindset' and rigorous engineering standards make him an ideal fit for the role.

TOP SKILL METRICS

Skill	Score (/5.0)
Python	5.0
FastAPI	5.0
SQL	5.0
Python Development	5.0
Pydantic	4.8
Github	4.5
Mongodb	4.5
Artificial Intelligence	4.5

ROLE AND PROJECT ALIGNMENT

Som Pande exhibits a high-trajectory technical profile that aligns exceptionally well with the 'Senior-mindset' expectations for the role, despite being within the 0-2 year experience bracket. His professional tenure at KPMG as an AI Engineer demonstrates strong Python proficiency, specifically in designing modular backend APIs using FastAPI and Flask. He has a proven track record of system optimization, such as reducing OpenAI API calls by 40% and maintaining sub-1.2s response times in high-concurrency environments. His work on the 'Modular AI RAG Framework' highlights an advanced architecture mindset, utilizing vector databases like Qdrant and stateless, plug-and-play designs. Furthermore, Som demonstrates rigorous engineering standards by maintaining 90% test coverage with Pytest and managing complex data pipelines involving millions of data points across SQL and NoSQL environments like Snowflake and MongoDB. His experience with asynchronous processing through Google Pub/Sub and automated mailing modules further proves his capability to handle the scalable, high-availability backend services required by NuumX Tech.

Relevant Projects:

- **Modular AI RAG Framework for Multi-Platform Assistants**

Designed and deployed a stateless, plug-and-play framework using FastAPI and Qdrant. This project demonstrates high-level backend architecture skills, optimization for real-time performance (latency < 1.2s), and context-aware response engineering.

- **Alteryx To Python Automation**

Built a Python-based alternative to Alteryx using Pandas, NumPy, and PyODBC. This project showcases the ability to migrate legacy workflows into 'Pythonic' code, cutting API costs and optimizing data processing pipelines.

- **Automated Email Response System**

Developed an intelligent mailing module using Gmail API, Google Pub/Sub, and FastAPI. It highlights his experience with asynchronous processing, real-time event triggers, and seamless third-party system integration.

- **AI-powered Resume Scanner (KPMG)**

Developed during his internship, this tool used Python and OpenAI to reduce screening time by 60%, showing early initiative in building high-impact, automated internal tools.
