

Som Pande

AI Engineer

Email: sompande93@gmail.com | Phone: +918527927199

AI Match Score: 94.0%

AI VERDICT

ACCEPT

Som Pande demonstrates an exceptional 94% technical match, showcasing advanced proficiency in GenAI, RAG frameworks, and production-grade backend architecture using FastAPI. Although he has fewer than 4 years of experience, his track record of building scalable data pipelines and high-performance APIs at KPMG proves he possesses the necessary skills for senior-level execution. His focus on performance optimization and cloud-native infrastructure makes him a high-value asset for AI engineering.

TOP SKILL METRICS

Skill	Score (/5.0)
Python	5.0
FastAPI	5.0
Pandas	5.0
Numpy	5.0
SQL	5.0
Pydantic	5.0
Artificial Intelligence	5.0
Data Science	4.8

ROLE AND PROJECT ALIGNMENT

Som Pande demonstrates a high degree of technical alignment with the Python engineering and data science integration aspects of the role, though he falls short of the requested 4+ years of professional experience, having graduated in 2023. His work at KPMG as an AI Engineer specifically mirrors the job's 'System Architecture' and 'Data Pipeline' requirements; he engineered a scalable pipeline to process millions of data points and designed backend APIs using FastAPI and Pytest with 90% test coverage. His expertise in the Data Science toolkit is evident through his use of Pandas, NumPy, and Scikit-learn to build alternatives to Alteryx and develop RAG frameworks. Furthermore, his focus on performance optimization is highlighted by his ability to maintain real-time response latencies of less than 1.2s in concurrent load environments. While his tenure is currently around two years (including internships), his technical output in AI integration, cloud platforms like Azure/GCP, and database management with Snowflake and SQL Server shows he possesses the core competencies needed to bridge experimental models with production-ready software.

Relevant Projects:

- **Alteryx To Python**

Developed a Python-based automation solution using OpenAI and knowledge graphs, integrating Pandas, NumPy, and PyODBC. This project directly aligns with the requirement for building robust data pipelines and optimizing API usage to cut costs.

- **Modular AI RAG Framework for Multi-Platform Assistants**

Designed a stateless, plug-and-play RAG framework using FastAPI and Qdrant. This demonstrates the candidate's ability to architect scalable backend services and productionize AI models for cross-platform integration.

- **Automated Email Response System**

Built an intelligent mailing module using FastAPI, Gmail API, and Google Pub/Sub. This showcases proficiency in asynchronous processing, real-time response triggers, and integration with cloud-native infrastructure like GCP.
