

Som Pande

AI Engineer & GenAI Specialist | RAG & Automation Expert

Email: sompande92@gmail.com | Phone: 8527927199

[linkedin.com/in/sompande10/](https://www.linkedin.com/in/sompande10/)

AI Match Score: 92.0%

EXECUTIVE SUMMARY

Som Pande is a high-impact AI Engineer at KPMG with a proven track record of architecting scalable Generative AI solutions and automating complex business workflows. He has demonstrated significant business value by migrating legacy systems to no-cost Python-based platforms, effectively reducing licensing costs to zero and optimizing API usage by 40%. His expertise spans the full AI lifecycle, from engineering high-performance RAG frameworks with 92% relevance to deploying robust backend APIs with 90% test coverage in enterprise environments.

AI EVALUATION VERDICT

ACCEPT

Som demonstrates exceptional technical proficiency in architecting high-performance RAG frameworks and scalable Python-based backend APIs, aligning perfectly with the core technical requirements. While his total years of experience are below the traditional senior threshold, his impactful work at KPMG and 92% match score indicate he possesses the necessary engineering discipline and model productionization skills. His proven ability to migrate legacy systems and optimize enterprise workflows makes him a high-value addition to the team.

STRATEGIC ALIGNMENT MATRIX

[NOT MET] 4+ Years Professional Experience

Qualification: Candidate graduated in 2023 and has approximately 2 years of total professional experience (internship + full-time).

[MET] Python Mastery (FastAPI, Flask)

Qualification: Architected backend APIs using FastAPI and built metadata management applications with Flask.

[MET] Data Science Toolkit (Pandas, Scikit-learn)

Qualification: Proficient in Pandas for data processing; engineered scalable pipelines for sentiment analysis and modular RAG frameworks.

[PARTIAL] Database Management (SQL/NoSQL)

Qualification: Extensive use of Snowflake (SQL) and Qdrant (Vector DB), but no explicit mention of PostgreSQL or standard NoSQL databases.

[PARTIAL] DevOps & Infrastructure

Qualification: Certified Azure AI Engineer with GCP experience, though Docker and CI/CD are not explicitly listed in the dossier.

[MET] Engineering Best Practices (Testing)

Qualification: Ensured 90% test coverage for enterprise-grade APIs and utilizes Pytest.

[PARTIAL] Technical Leadership

Qualification: Architected complex automation platforms and migrated 150+ workflows, showing ownership, but lacks formal mentorship evidence.

CORE COMPETENCY METRICS

PROFESSIONAL EXPERIENCE TIMELINE

AI Engineer @ Lighthouse, KPMG India

Jan 2024 - Present

Architected a Python/OpenAI automation platform that migrated 150+ workflows, reducing client licensing costs to zero. Engineered a scalable pipeline processing millions of data points to enhance sentiment analysis accuracy. Designed backend APIs for supply-chain systems using FastAPI, ensuring 90% test coverage for enterprise-grade reliability.

Lighthouse Intern @ Lighthouse, KPMG India

Feb 2023 - Aug 2023

Developed an AI-powered Resume Scanner that reduced recruitment screening time by over 60% through automated scoring and rationale generation. Built a secure metadata management application using Flask and Azure, integrating SSO for non-technical users.

KEY PROJECTS & INNOVATION PORTFOLIO

Alteryx To Python

Tech: Python, OpenAI, Knowledge Graphs, Snowflake, Pandas

Created a no-cost alternative to Alteryx using graph-driven architectures that reduced OpenAI API calls by 40%. This project demonstrates deep expertise in replacing expensive legacy software with custom, scalable Python-based AI solutions.

Modular AI RAG Framework for Multi-Platform Assistants

Tech: FastAPI, OpenAI APIs, Qdrant, Vector Search

Deployed a stateless RAG framework achieving 92% response relevance and sub-1.2s response times across WhatsApp, Slack, and web platforms. This highlights advanced proficiency in vector database management and low-latency AI deployment.

Automated Email Response System

Tech: FastAPI, Gmail API, Google Pub/Sub, OpenAI

Developed an intelligent mailing module that triggers real-time, context-aware responses using asynchronous processing. It showcases the ability to integrate LLMs into live enterprise communication streams via GCP infrastructure.

Modular AI RAG Framework

Designed and deployed a stateless RAG framework using FastAPI and Qdrant. This project aligns with the JD's focus on system architecture and performance optimization, as Som managed to maintain high response relevance and low latency (<1.2s) under concurrent load.

Alteryx To Python Migration

Engineered a Python-based alternative for legacy ETL tools using Pandas, NumPy, and PyODBC. This demonstrates his ability to build and optimize robust data pipelines for large-scale data ingestion and transformation across Snowflake and SQL Server.

AI-powered Resume Scanner

Created a metadata management application using Flask and Azure. It highlights his experience with cloud environments and backend development with security features like SSO, aligning with the job's DevOps and infrastructure requirements.

ACADEMIC & PROFESSIONAL CREDENTIALS

Education:

B.Tech: Computer Science Engineering - Shiv Nadar Institute of Eminence (2019 - 2023)

Certifications:

Microsoft Certified: Azure AI Engineer Associate, KPMG Super Team Award '25
