Education

Shiv Nadar Institute of Eminence

2019 – 2023

B.Tech: Computer Science Engineering

GPA: 7.9

Experience

Lighthouse, KPMG India

AI Engineer

Jan'24 - Present

- Built a Python and OpenAI-based workflow automation platform, migrating **150+ workflows** from Alteryx to a no-cost solution, reducing client licensing costs to **zero**.
- Engineered a scalable pipeline to extract and preprocess **millions of data points** across different social media platforms, enhancing sentiment analysis accuracy and processing efficiency.
- Developed the backend architecture and APIs of supply-chain management system, implementing comprehensive unit tests to ensure reliability and scalability.

Lighthouse Intern

Feb'23 – Aug'23

- Created an AI-powered Resume Scanner to optimize HR screening, saving time by evaluating resumes against job metrics, providing scores, rationale, and an overall rank for top candidates.
- Designed user-friendly metadata management app using Flask, Python, and Azure. Enhanced backend with SSO, restricted access, and intuitive UX for non-tech users.

Projects

Alteryx To Python

- Developed a Python-based alternative to Alteryx using OpenAI, knowledge graphs, various data processing libraries, and a custom Python package to support workflow automation.
- Engineered a graph-driven approach to extract node relationships and optimize API usage, cutting OpenAI API calls by 40% while ensuring high accuracy through advanced prompting techniques.
- Integrated robust data processing and connectivity, enabling seamless data ingestion and export across Snowflake, SQL Server (ODBC/DSN), .txt, .csv, .xlsx, and .hyper files using pandas, numpy, openpyxl, pyodbc, pantab, and hyperapi.

Modular AI RAG Framework for Multi-Platform Assistants

- Designed and deployed a stateless, plug-and-play Retrieval-Augmented Generation (RAG) framework using FastAPI, OpenAI APIs, and Qdrant vector store with seamless integration across platforms like web, WhatsApp, Slack, and voice interfaces.
- Engineered an efficient pipeline to generate context-aware responses from domain-specific data using OpenAI embeddings and vector search similarity, achieving 92 % relevance in output quality across 100+ queries during internal benchmarks
- Optimized system latency and memory usage to ensure real-time performance (*avg.responsetime* < 1.2s) under concurrent load, while maintaining modularity for flexible deployment across front-end clients without user state coupling.

Automated Email Response System

- Designed an intelligent mailing module using Gmail API, Google Pub/Sub, and FastAPI to detect incoming emails from relevant senders and trigger real-time responses.
- Developed a dynamic response engine that generates realistic and professional replies using OpenAI, leveraging a predefined knowledge base for context-aware communication.
- Ensured seamless integration with existing systems and maintained high reliability through efficient asynchronous processing and email thread management.

Skills

Languages: Python, SQL

Technical Skills: Python Development, Data Analysis, Data Science, Artificial Intelligence, Automation, Generative AI, Data Science

Platforms: Google Cloud Platform, Microsoft Azure, FastAPI, Streamlit, Pydantic, Tableau, Alteryx, Github, Render

Data Skills: Information Retrieval, EDA, Pandas, Numpy, Snowflake, MongoDB, Excel

AI Skills: OpenAI, Gemini, Pydantic AI, RAG, Langchain, Agentic AI, Multi-AI Agents, Vector DB

Achievements

Microsoft Certified: Azure AI Engineer Associate

KPMG Super Team Award '25: Recognized as part of the best-performing team for outstanding collaboration, innovation, and impact on key business initiatives.
